

Windows Static Cling Poster Installation

Introduction: Installing Static Cling is a very easy process. Our short guide will show you step by step how to do a professional looking installation.

1

Tools Needed: To prepare for your installation, you will need the follow items:

- Razor Blade
- Measuring Tape,
- Level
- Squeegee and/or credit card
- Water - (**DO NOT USE “Windex or any chemical windows cleaning spray on graphic Film)**

*You will need two people for larger graphics; one to hold the graphics and one to help apply them. You should prepare your window by cleaning it with any non-abrasive window cleaner and allowing it to dry.

Start to pull away the paper backing. Start from the top of the cling working your way down slowly. Peel the backing away carefully being sure that no piece of cling folds in on itself as this may damage the graphic.

2

- Positioning the Graphics: Now, we can begin to position our window graphics. If you are looking to center your static cling, use a tape measure to measure the height and width of the window to find the center point at which to place the graphic.

- Use the level to ensure your graphics are properly-positioned.

3

- Applying the Graphics:

- Lifting the cling away from the window, spray the glass liberally with water. This will help eliminate air bubbles.

- Slowly begin to lay the cling down on the window. Using the squeegee to secure the cling to the window, start from the top and use a downward swiping motion, pushing the water and trapped air towards the outside edges.

- Once entire graphic is installed, carefully remove the masking tape while another person holds the static cling in place.

- Squeegee any remaining air bubbles and gently wipe off any water along the edges with a paper towel.

Now your static cling has been successfully installed! Static window clings are a reusable material. If at any point you are not happy with the installation or position of the decal, you can gently remove it from the glass and reposition it. If you intend on reusing your window cling, we recommend holding on to the paper backing and package for storage.
